

Know Your Organ Systems

Lesson Title: *Skin as an Organ*

Page 1 of 1

Name: _____

Draw a line between the organ system and its description and function.

Organ System	Description and Function
1. Circulatory	(a) a system made up of the brain, spinal cord, and nerves that receives and interprets stimuli and transmits impulses to organs
2. Digestive	(b) a system of blood, blood vessels, lymphatics, and heart concerned with the circulation of the blood and lymph
3. Endocrine	(c) a system consisting especially of the nose, larynx, trachea, bronchi, and lungs that controls breathing
4. Integumentary	(d) a system comprising the kidneys, ureters, urinary bladder, and urethra that regulates urination
5. Muscular	(e) a system that consists of the bones, cartilage, and joints that supports and protects the body, produces blood cells, and stores minerals
6. Nervous	(f) a system involving the mouth, stomach, and intestines that is concerned with the ingestion, digestion, and absorption of food
7. Reproductive	(g) a system involving especially the pituitary and thyroid glands, ovaries, and testes that produces secretions and helps control moods, growth and development, and metabolism.
8. Respiratory	(h) a system consisting of the skin, hair, nails, and sweat glands that protects the body and controls body temperature
9. Skeletal	(i) a system involving organs such as the uterus, penis, ovaries, and testes that deals with reproduction
10. Urinary	(j) a system made up of muscle tissue that helps move the body and move materials through the body
